

Reading Guide

Boris Yanev

Learning outcome 1 - Conceptualize, design, and develop interactive media products

Self assessment: Proficient

Conceptualizing

Logo Shapes Idea

Website wireframe

Cal. GUI wireframe

Design

Poster

Interactive Media Product

Cal. Twitch Overlay

Portfolio Website

Chessplatform Re-design

Learning outcome 2 - Transferable Production

Self assessment: Proficient

Git

S3MC-Patchwork Repository

Portfolio Repository

Test Game Repository

Desca-game Repository

Code comments

Manuals

User Manual

Technical Manual

Figma

Webpage Figma

GUI overlay figma

Organisation

Discord

Learning outcome 3 - Creative Iterations

Self assessment: Proficient

Webpage wireframe

Logo Fonts

Overlay gui overlay

Chessplatform front-end

Learning outcome 4 - Professional Standards

Self assessment: Proficient

Research Documents

Desca current audience research document

How to write commit messages

Stakeholders communication

Meeting with Desca

Meeting with coaches

Meeting with chess player

Scrum

Jira board

Jira tickets

Stand up meetings

Learning outcome 5 - Personal Leadership

Self assessment: Proficient

Weaknes

Unable to finalize fidelity

Strenght

Advanced coding skills

Advanced git skills

Feedpulse

Career day

Expo day

Personal Projects

Self Reflection

Nightmare.

Design has always been my biggest weakness and because im a madman I decided to jump with both feet into this semester just for fun.

I will never explain why I did this. For my 7th semester I could have chosen way cooler stuff like going to Korea or Japan for a minor degree or be lazy and go to Pulsed to eat chalk and make sport socks for people with dissabilities. Instead I decided to approach my weakness and suffer criticism from designers.

The people I met really changed me. I spectated my teammates design cool stuff which I could never be able to do. But by just spectating I was able to improve a lot. My improvements have been reflected in the design of my personal projects like: My custom designed Arch Linux rice (you can google what that is) and redesigning one of my big projects.

The hardest part was for me to change my way of thinking. Before I would always leave an ugly front-end because I would say "I'm not media I dont care about it" but now things have reversed and I had to change fundamentally. Now I am able to spot trigger points in design more easily than before. For example me revisiting a project that got me outstanding in software and imidiatly making me mad on how bad it looks like really got me to think how much I have improved in that matter.

Overall it has been a fun experience attending this semester. I don't care if I pass or not because I managed to develop parts of me which I considered helpless and that is what matters the most to me.
