

Reading Guide

Boris Yanev

Abststract

I'm Boris. I don't sleep, I code.

I'm coming from heavey software background. I'm so heavy in the software that I find it easier to program my pdf files in typst rather than using word. My friends think I'm insane for starting Linux with Arch which is like daily-driving a Tesla you have to engineer yourself, without mechanical training, while the parts are still ore in the ground. Almost everything I do is done in the bash terminal. I know a thing or two about stuff.

This semester tho, I don't know a single thing about stuff. My goal for the semester is to come out with a better idea of how the design prosses is done. From conceptualizing to creating it. For me it is more important to lean how it is done rather than being good at it because if I have a manual to follow while doing something over and over again at some point you become better at it. An example is going to the gym. If you go there doing random exercises it will be way harder to build muscle than having a strict plan.

I'm part of Parchwork who's client is a streamer called Desca and our project is to make her a game for her viewers to play when the stream gets boring.

This document is only a reading guide to my portfolio which is in the form of a website. The portfolio should be something that I have to make to show my progress in this semester. I've coded a lot of websites but I have never made pretty ones so my goal is to make a pretty page as my portfolio that can be shown as a result of my development. Bellow is a link to it.

Learning outcome 1 - Conceptualize, design, and develop interactive media products

Self assessment: Proficient

Conceptualizing

[*Logo Shapes Idea*](#)

[*Website wireframe*](#)

[*Cal. GUI wireframe*](#)

Design

[*Poster*](#)

Interactive Media Product

[*Cal. Twitch Overlay*](#)

[*Portfolio Website*](#)

[*Chessplatform Redesign*](#)

[*Self Reflection*](#)

Learning outcome 2 - Transferable Production

Self assessment: Proficient

Git

[*S3MC-Patchwork Repository*](#)

[*Portfolio Repository*](#)

[*Test Game Repository*](#)

[*Desca-game Repository*](#)

[*Code comments*](#)

Manuals

[*User Manual*](#)

[*Technical Manual*](#)

Figma

[*Webpage Figma*](#)

[*GUI overlay figma*](#)

Organisation

[*Discord*](#)

[*Self Reflection*](#)

Learning outcome 3 - Creative Iterations

Self assessment: Proficient

[*Webpage wireframe*](#)

[*Logo Fonts*](#)

[*Game gui*](#)

[*Twitch Overlay*](#)

[*Self Reflection*](#)

Learning outcome 4 - Professional Standards

Self assessment: Proficient

Research Documents

[*Desca current audience research document*](#)

[*How to write commit messages*](#)

[*Search Fatigue Research*](#)

[*Chess Player User Research*](#)

[*Defining Chess Players Problems*](#)

[*Generating Ideas for Chessplatform*](#)

Stakeholders communication

[*Meeting with Desca*](#)

[*Meeting with coaches*](#)

[*Meeting with chess player*](#)

Scrum

[*Jira board*](#)

[*Final Presentation*](#)

[*Self Reflection*](#)

Learning outcome 5 - Personal Leadership

Self assessment: Proficient

Weakness

[*Unable to finalize fidelity*](#)

strength

[Advanced coding skills](#)

[Advanced git skills](#)

[Personal Goal](#)

Events

[Career day](#)

[Showcase day](#)

Individual Work

[Deployment](#)

[Typst](#)

[Taskwarrior-tui](#)

[Self Reflection](#)

Sorry Wouter for not implementing the feedback you gave me on the reading guide fully. I know you spend like 30 minutes and a lot of energy drawing that board with the whole explanation but I feel I already put a big bulk of text inside the portfolio and wanted to keep the reading guide as short as possible.

Self Reflection

Design has always been my biggest weakness and because im a madman I decided to jump with both feet into this semester just for fun.

The people I met really changed me. I spectated my teammates design cool stuff which I could never be able to do. But by just spectating I was able to improve a lot. My improvements have been reflected in the portfolio and I feel like I can see an improvement curve between the ugly poster and the gui wireframe in Figma.

The hardest part was for me to change my way of thinking. Before I would always leave an ugly front-end because I would say "I'm not media I dont care about it" but now things have reversed and I had to change fundamentally. Now I am able to spot trigger points in design more easily than before. For example me revisiting a project that got me outstanding in software and imidiatly making me mad on how bad it looks like really got me to think how much I have improved in that matter.

Overall it has been a fun experience attending this semester. I don't care if I pass or not because I managed to develop parts of me which I considered helpless and that is what matters the most to me.
